

Descriptives for Displacement Analysis Sample

1 Summary Statistics

Start by clearly defining your sample and summarizing the baseline characteristics. Stata's `table` command is used to create the tables in this section.

Here is a standard summary table, showing sample characteristics in the baseline year (year prior to event, both treatment and control) over time.

Table 1: Summary Statistics in Baseline Year over Time

	1993	1999	2004
Birth Year	1951.24 [8.32]	1958.39 [8.18]	1963.78 [7.80]
Age	41.76 [8.32]	40.61 [8.18]	40.22 [7.80]
Female	0.32 [0.47]	0.40 [0.49]	0.33 [0.47]
Years of Schooling	11.07 [2.34]	11.02 [2.27]	11.88 [2.44]
Earnings	6645.17 [1847.02]	7860.75 [2250.09]	9612.08 [2991.33]
Log Earnings	8.76 [0.27]	8.93 [0.29]	9.12 [0.31]
Employed	1.00 [0.00]	1.00 [0.00]	1.00 [0.00]
Firm size	522.42 [411.06]	471.92 [372.14]	582.28 [488.52]
Number of Observations	204	176	110

Next, we create a summary table with overlapping columns (that is not mutually exclusive), showing the sample characteristics of the all workers as well as the treatment and control groups.

Table 2: Summary Statistics by Displacement Status

	All workers	Non-Displaced	Displaced
Birth Year	1956.0 [9.1]	1956.0 [9.1]	1956.0 [9.1]
Age	41.3 [8.2]	41.3 [8.2]	41.3 [8.2]
Female	0.4 [0.5]	0.4 [0.5]	0.4 [0.5]
Years of Schooling	11.4 [2.3]	11.4 [2.3]	11.4 [2.3]
Earnings	7779.1 [2322.4]	7779.1 [2322.4]	7779.1 [2322.4]
Log Earnings	8.9 [0.3]	8.9 [0.3]	8.9 [0.3]
Employed	1.0 [0.0]	1.0 [0.0]	1.0 [0.0]
Firm size	540.0 [445.9]	540.0 [445.9]	540.0 [445.9]
Number of Observations	1,626	1,626	1,626
Number of Establishments	94	94	94

Notes: Average characteristics of individuals. Standard deviations in brackets.

Next, we create a table summarizing the distribution of the variables of interest. We report the 10th, 25th, 50th, 75th, and 90th percentiles, min, max, as well as the mean and standard deviation. Looking at details like this can often catch problems with the data cleaning or the data itself.

Table 3: Summary Statistics with Percentiles

	10th pct	25th pct	50th pct	75th pct	90th pct	Min	Max	Mean	SD	N
Birth Year	1943.00	1948.00	1956.00	1963.00	1968.00	1938.00	1976.00	1955.98	[9.12]	1,626
Age	30.00	34.00	42.00	48.00	53.00	28.00	55.00	41.34	[8.20]	1,626
Female	0.00	0.00	0.00	1.00	1.00	0.00	1.00	0.38	[0.48]	1,626
Years of Schooling	8.00	9.00	11.00	13.00	15.00	8.00	15.00	11.37	[2.31]	1,626
Earnings	5056.25	5923.57	7454.02	9324.08	10977.38	3427.57	20515.89	7779.11	[2322.43]	1,626
Log Earnings	8.53	8.69	8.92	9.14	9.30	8.14	9.93	8.92	[0.29]	1,626
Employed	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00	[0.00]	1,626
Firm size	141.02	214.83	405.37	649.30	1099.06	61.27	2323.09	540.00	[445.93]	1,626

Next, we create a table showing the industry composition of the sample. This is a simple table showing the percentage of workers in each industry for the treatment and control groups. This should be perfectly balanced by construction but it is a good check to make sure that the matching is working.

Next, we create descriptive figures showing the evolution of some key variables by year.

Table 4: Industry Distribution by Displacement Status

	Non-displaced	Displaced
Mining	12.4	12.4
Construction	10.7	10.7
Manufacturing	12.2	12.2
Health	13.7	13.7
Finance	18.5	18.5
FCSL	21.6	21.6
Professional Services	10.9	10.9
Total	100.0	100.0

Table 5: Number of Workers by Industry and Year

	1993	1994	1995	1997	1998	1999	2000	2001	2002	2003	2004
Mining	30	44	16	40	12	18	14		8	6	14
Construction	24	30	10	32	12	20	18	2	10	8	8
Manufacturing	26	50	14	34	14	28	10		2	10	10
Health	24	32	40	44	10	32	10		8	8	14
Finance	34	46	30	34	22	30	26	8	22	12	36
FCSL	44	66	36	50	20	36	42		22	22	14
Professional Services	22	30	28	30		12	10		14	18	14

Notes: Each cell shows number of workers per cell

2 Consistency Checks

Figure 1: Consistency Checks

(a) Counts by Year

(b) Earnings by Year

(c) Log Earnings by Year

(d) Log Earnings Percentiles by Year

(e) Employment by Year

(f) Displaced by Year

3 Treatment and Control around Displacement Event

Now we create a set of figures showing the treatment and control groups around the displacement event. Given the matching design, this already allows us to get a good sense of the treatment effect. Looking at the raw means like this is often a much better way to understand what is happening then going straight to the eventstudy.

Figure 2: Treatment and Control around Displacement Event
